Introduction

RNUS is a collaborative center jointly operated by the School of Engineering and Technology (SET), Asian Institute of Technology (AIT), and the International Center for Urban Safety Engineering (ICUS), Institute of Industrial Science, The University of Tokyo. RNUS was founded in **2002** to promote research and educational activities for improving urban safety and disaster prevention in Asian countries by promoting collaborative research with various organizations in areas of urban safety engineering.

RNUS' s main focus is developing innovative technologies such as numerical models and geospatial technologies for managing urban infrastructures, mitigating urban disaster risk and environmental problems, and adapting climate change for sustainable development in Asian cities and the Mekong River basin.

Major activities

- Establishing **regional research network** for sharing information and technology in the field of urban safety engineering.
- Conducting **collaborative research** with various **research institutes, governmental and international organizations** in Asia.
- Developing and disseminating innovative urban safety technology by considering **sustainability** and unique regional characteristics.
